L-42- Valuation Basis (Life Insurance)

A chapter on Valuation basis covering the following minimum criteria should also be displayed on the web-site of the Insurers.

a. How the policy data needed for valuation is accessed.	The policy data is extracted from the Ingenium (policy administration system) and checks are performed for completeness and consistency of data. The current months data is reconciled with the previous months data and the movements during the month. Consistency check is done for number of contracts, sum assured. The premium and unit fund data is reconciled with Finance data. Checks are also performed by reconciling it with data extracted for other purpose eg reinsurance reporting
b. How the valuation bases are supplied to the system	Prophet (actuarial software) is used for valuation. The bases and parameters are passed on to Prophet. The Bases are also Extracted from Prophet run results and compared with bases stored in spreadsheets for consistency.
