## Investment Strategy:

There are well-defined categories of funds across the risk-return spectrum. Based on the objectives and risk return profile of each fund, investments are made in various assets classes like equity and debt. The Investment team is adequately staffed and structured for effective management of respective funds and also to ensure independent checks and monitoring of investment performance. A process driven and moderate risk approach is followed. While choosing stocks in portfolio, the business model, competitive edge, management quality, sustained economic earnings, and corporate governance is assessed

## Risk Management Practice :

Company's investment exposure to any industry is as per limits prescribed by IRDAI under Investment Regulations and the same is monitored on a daily basis. In addition, the company also follows stringent asset allocation metrics as per policy features communicated to the policy holder and the same is adhered to while making investment decisions. Investment Committee which acts as the policy making body for the investment operations, periodically discusses the investment strategy, portfolio structures, performance of the portfolio and other issues relating to the investment portfolio. The Asset & Liability Management Committee reviews the asset liability management strategy, investment risk, and other related risks periodically
